1 Introduction

1.1 Overview

The foundation of the ISAN audiovisual identification system is based on the ISO standards 15706-1 and 15706-2. ISAN International Agency (ISAN-IA) the ISAN registration authority, is in charge of maintaining and updating the ISAN metadata schemas for the proper description of audiovisual works and their versions. The ISAN registration, matching and bulk search process as well as the ISAN API, all based on the ISAN metadata schema, are also defined and maintained by ISAN-IA based on inputs from ISAN registration agencies and ISAN users.

There are two sets of ISAN metadata: the ISAN Work Metadata for the identification of audiovisual works (covering both episodic and non-episodic works), and the ISAN Version Metadata for the identification of Versions or Variants (Expressions and Manifestations) as well as closely related content and items (subtitling files, closed captions, etc...). Both metadata sets are stored in the centralized ISAN registry. It is vital to the integrity of the ISAN system to have the most complete and accurate metadata as possible. If information changes or becomes available after the initial registration, an immediate update is recommended.

The information used to describe an audiovisual work in the ISAN registry is defined in the chapter 2 Descriptive information for the identification of audiovisual works, the information used to describe versions of audiovisual works is described in the chapter 3 Descriptive information for the identification of versions of an Audiovisual Work.

1.2 Character encoding

The ISAN system is using the UTF-8 Charset to preserve the special characters that may be used in the various languages. Be aware that if the XML data is not encoded in UTF-8 all special characters such as accents will be transformed into undesired characters and will lead to unusable data.

For more information about use of special characters refer to the W3C XML specifications.

1.3 XML Schemas

Main schema for non-episodic (single) works:
http://www.isan.org/schema/v1.11/common/common.xsd

Main schema for serial headers (series) and episodic works (serial episodes):
http://www.isan.org/schema/v1.21/common/serial.xsd

Main XML schema used for version of works (ISAN Version or V-ISAN):
http://www.isan.org/schema/v1.11/common/version.xsd
Other dependent schemas:
- ISAN representation: http://www.isan.org/ISAN/isan.xsd
- Titles representation: http://www.isan.org/schema/v1.11/common/title.xsd
- Other IDs representation: http://www.isan.org/schema/v1.11/common/externalid.xsd
- Participants representation: http://www.isan.org/schema/v1.11/common/participant.xsd
- Countries representation: http://www.isan.org/schema/v1.11/common/country.xsd

1.4 How to read the tables in this document?

Column “Element”: the name of the ISAN data field. When the name is followed by an asterisk (i.e. “ * ”) it means that the data is a compulsory for ISAN allocations.

Column “Occurrence”: indicates the possible number of occurrence for the data element.
- 0 means that the element can be omitted
- 1 : means that the element is unique (not repeatable).
- 1 or more: means that the element can be unique or repeated an unlimited number of times.

Column “Type”: the XML complex type defined to represent the element. Blue underlined text indicates an hyperlink to the corresponding element in the document.

2 Descriptive information for the identification of audiovisual works

An ISAN can be applied to episodic or non-episodic Audiovisual Work (AV Work) consisting of a sequence of related images, with or without accompanying sound, which is intended to be made visible as a moving image.

ISAN identifies audiovisual works as distinct intellectual realizations. The first known manifestation of the AV Work is identified with an ISAN “work” (version segment of the ISAN code set to zero). For the identification and description of all other variants and manifestations of the work, an ISAN “version” or V-ISAN applies (version segment of the ISAN code is different from zero).

The information used to describe an audiovisual work in the ISAN registry is defined in this section. The main attribute of an audiovisual work is WorkMetadata, whether the work is episodic (serial episode) or non-episodic (single work).

Compared to single works, the WorkMetadata attribute for episodic works contains an additional EpisodeDetail element.

- The list of elements contained in WorkMetadata is described in the section Single Works / Serial Episodes: WorkMetadataType
- The list of elements contained in EpisodeDetails is described in the section EpisodeDetailType

The main attribute to describe series is the SerialHeader, the elements contained in a Serial header is described in the section Series: SerialHeaderType

2.1 Single Works / Serial Episodes: WorkMetadataType

The WorkMetadataType is used to describe an audiovisual work with all associated metadata.

### ISAN Data Fields

#### 2.2 Series: SerialHeaderType

Series are represented with a Serial Header. A Serial Header is an object that represents a serial and binds all episodes whatever the season. The main attribute of a Serial Header is the list of titles for the serial. The identifier of the Serial Header is the root ISAN (= root segment of the ISAN = the 12 first digit of an ISAN). All episodes of a serial are attached to the same Serial Header and therefore their ISAN have all the same root segment. The SerialHeaderId is only created when a first episode of the serial is identified with ISAN. For bulk loads of new serials, use the SerialHeaderRegistrantId instead.

**Note on seasons:**
There is no object to describe seasons, instead, episodes have a season number field. ISAN-IA is currently defining a season object that will enrich the ISAN metadata schema by 2018. In the meantime, season can be identified with ISAN as a compilation of all episodes of the season.

<table>
<thead>

</tr>
</tbody>
</table>

* * when writing in the registry (registration), 1 when reading the registry.
** 0 for single works (non episodic), 1 for serial episodes (episodic).
### ISAN Data Fields

**SerialHeaderId**

Serial Header Identifier.

12 hexadecimal digits of the ISAN root segment that is shared by episodes of the serial.

**isinType**

0 or 1*

**SerialHeaderRegistrantId**

Registrant ID (or token) provided by the registrant to identify a Serial Header.

**SerialHeaderRegistrantIdType**

(xs:string) 0 or 1*

**SerialTitleList**

List of original and alternate title(s) for the Serial.

**TitleListType**

1

* One of the **SerialHeaderRegistrantId** or **SerialHeaderId** is required. **SerialHeaderRegistrantId** can only be used at the creation of the serial in the registry, Readers or registrants adding episodes to the serial shall use **SerialHeaderId**.

**Example**

```xml
<serial:SerialHeader>
  <serial:SerialHeaderId root="0000-0000-DC86"/>
  <serial:SerialTitleList>
    <title:TitleDetail>
      <title:Title>Baywatch</title:Title>
      <title:Language>
        <language:LanguageLabel>english</language:LanguageLabel>
        <language:LanguageCode>
          <language:CodingSystem>ISO639_2</language:CodingSystem>
        </language:LanguageCode>
      </title:Language>
      <title:TitleKind>ORIGINAL</title:TitleKind>
    </title:TitleDetail>
    <title:TitleDetail>
      <title:Title>Alerte à Malibu</title:Title>
      <title:Language>
        <language:LanguageLabel>english</language:LanguageLabel>
        <language:LanguageCode>
          <language:CodingSystem>ISO639_2</language:CodingSystem>
        </language:LanguageCode>
      </title:Language>
      <title:TitleKind>ALTERNATE</title:TitleKind>
    </title:TitleDetail>
  </serial:SerialTitleList>
</serial:SerialHeader>
```
3 Descriptive information for the identification of versions of an Audiovisual Work

3.1 Introduction: the kind of versions and their relationships

All variants or manifestations of episodic or non-episodic audiovisual works registered with ISAN can be identified with an ISAN version or V-ISAN.

Versions of audiovisual works can only be registered if a valid ISAN has been previously allocated to the audiovisual work. The issue of automatic (provisional) pre-registering of ISAN numbers for massive version registrations that would apply to works that have no ISAN number at the time of said version registration is currently discussed and envisaged by ISAN-IA members.

An ISAN version can be applied to any specific instance (or version) of an AV Work that can result from any particular aggregation of elements that affect the content of an Audiovisual Work already identified with an ISAN. Versions can be:

- **Variants of AV Works**, which are audiovisual contents resulting from change(s) to the AV Work that do not significantly alter the nature of the intellectual creation (i.e. does not result into a new/different intellectual creation). Such changes can for example be one or a combination of: minor editions, the addition of subtitles, dubbing, alterations of the soundtrack, etc... Variants are usually abstract things since any fixation on a physical medium or digital asset can be pointed to (see manifestations below). A variant can exist only if an AV Work exists.

- **Manifestations of the AV Work**, which are characterized by the fixation of the AV work or a variant of it on a physical medium (e.g. film print, tape, digital file, ...). Since an increasing number of audiovisual works are dematerialized (without a fixed physical carrier), manifestations can also be digital assets such as files or streams without physical properties. A manifestation can exist only if an AV Work exists. Manifestations are described with a specific set of metadata that defines the technical properties of the embodiment (Low Definition / High Definition, 16:9 / 4:3, 2D/3D, etc...) and the media of fixation (Blu-ray, Film Print, DVD, Windows Media File, etc...).

- **Related Contents**: contents closely related to an audiovisual work or version identified with ISAN can be identified with an ISAN Version. Such related contents can be a trailer, bonus material such as “behind the scenes” or interviews of actors or the director, etc...

- **Related Items**: to some extent, contents such as audio tracks, closed captioning, ring tones, fingerprints, etc... that are derived from or closely related to a version of the audiovisual work can be identified with an ISAN version.
An audiovisual work and its many variants and manifestations can be linked together in an audiovisual hierarchy as in the example below:

Version are defined by a Version Kind and a Relationship in order to identify properly the versions and their relationship with “parent” works or versions.

For example:

<table>
<thead>
<tr>
<th>#</th>
<th>Version Kind</th>
<th>Relationship</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Language</td>
<td>is dubbing of</td>
<td>The Italian dubbed version of a Feature Film originally released in French. This version is a variant.</td>
</tr>
<tr>
<td>2</td>
<td>Edition</td>
<td>is colorized version of</td>
<td>The colorized version of a Black and White patrimonial work. This version is a variant</td>
</tr>
<tr>
<td>3</td>
<td>Media</td>
<td>is media manifestation of</td>
<td>The fixation of the above colorized work on a film print. This version is a manifestation.</td>
</tr>
<tr>
<td></td>
<td>(#2)</td>
<td></td>

<td>(#1)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### 3.2 VersionType

The VersionType is used to describe a version of an audiovisual work with all associated metadata.

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>VersionMetadata</td>
<td>Descriptive information of the version of an AV work.</td>
<td>VersionType</td>
<td>1</td>
</tr>
<tr>
<td>V-ISAN</td>
<td>ISAN version that identifies the current version of work with this set of metadata. The V-ISAN is represented with 16 hexadecimal digit followed with a check character (using Arabic numerals 0 to 9 and letters A to Z), followed by an 8 hexadecimal digit version segment (cannot be null), followed with a check character (using Arabic numerals 0 to 9 and letters A to Z).</td>
<td>isanType</td>
<td>0 or 1*</td>
</tr>
<tr>
<td>Parent Work</td>
<td>ISAN that identifies the parent work of the version</td>
<td>isanType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Parent Version</td>
<td>Only if the current version is a version of a this is the V-ISAN of the parent version.</td>
<td>isanType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Relations</td>
<td>The relationship between the current version and the parent work or version. Closed list of values that qualify the relationship. See the full list of codes in ISAN_SCHEMA Appendix: List of Codes</td>
<td>Relations</td>
<td>1</td>
</tr>
<tr>
<td>DescriptiveName</td>
<td>A free text description of the version of the work, generally the name by which the version is known by the registrant.</td>
<td>Description (xs:string)</td>
<td>0 or 1</td>
</tr>
<tr>
<td>TitleList *</td>
<td>List of Title(s) for the Version (original, alternate, translated)</td>
<td>TitleListType</td>
<td>1</td>
</tr>
<tr>
<td>RunningTime</td>
<td>Approximate duration of the version. Can be expressed in minutes, seconds or milliseconds. Positive integer value</td>
<td>DurationType</td>
<td>1</td>
</tr>
<tr>
<td>ReferenceDate</td>
<td>year or date of reference for the version. This can be the date or year of release in theatres, the year of release for a Blu-ray edition, or the broadcast date and time of a TV program (e.g. 2012-11-23 18:05:22). This field accept values in the following format: - YYYY: Year as for example 2009 - YYYY-MM: Year-month as for example 2009-05 for May 2009 - YYYY-MM-DD: Year-Month-Day as for example 2009-05-22 for 22nd of May 2009 - YYYY-MM-DD-HH:MM:SS T: Year-Month-Day-Hour:Minutes:Seconds Timezone as for example 2009-05-22-12:15 or 2009-05-22-12:15:03 or 2009-05-22-12:15:03 +7 (where +7 means CET+7)</td>
<td>xs:dateTime</td>
<td>1</td>
</tr>
<tr>
<td>SpokenLanguages</td>
<td>Specify the spoken language(s) of the version (ISO 639-2 code). If the version has several</td>
<td>OriginalLanguageListType</td>
<td>0, 1 or more</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
<td>Data Type</td>
<td>Length</td>
</tr>
<tr>
<td>------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>----------------------------</td>
<td>--------</td>
</tr>
<tr>
<td>WrittenLanguages</td>
<td>Written languages other than for subtitles (e.g. closed captions, text description), specify the language(s) of such text (ISO 632-2 code). If several languages are available, specify each of them.</td>
<td>OriginalLanguageListType</td>
<td>0, 1 or more</td>
</tr>
<tr>
<td>SubtitleLanguages</td>
<td>Specify the subtitle language(s) of the version (ISO 632-2 code). If version contains several subtitles (a Blu-ray or DVD for example), specify each subtitle language.</td>
<td>OriginalLanguageListType</td>
<td>0, 1 or more</td>
</tr>
<tr>
<td>AudioDescriptionLanguages</td>
<td>Specify the audio description language(s) of the version (ISO 632-2 code). If version contains several audio descriptions (a Blu-ray or DVD for example), specify each supported language.</td>
<td>OriginalLanguageListType</td>
<td>0, 1 or more</td>
</tr>
<tr>
<td>ColorFormat</td>
<td>The color scheme that applies to the moving images such as &quot;Color&quot;, &quot;Black and White&quot;, &quot;Colorized&quot;, etc. See the full list of codes in ISAN Schema Appendix: List of Codes.</td>
<td>ColorType (xs:string)</td>
<td>0 or 1</td>
</tr>
<tr>
<td>ImageDimension</td>
<td>Specify whether the image dimension is in 2D or 3D.</td>
<td>ImageDimension (xs:string)</td>
<td>0 or 1</td>
</tr>
<tr>
<td>ImageDefinition</td>
<td>Specify the image definition from the closed list of choices, e.g. SD, HD, 2K, 4K, 35mm (film print), .... See the full list of codes in ISAN Schema Appendix: List of Codes.</td>
<td>ImageDefinition (xs:string)</td>
<td>0 or 1</td>
</tr>
<tr>
<td>ImageAspectRatio</td>
<td>Specify the image aspect ratio from the closed list of choices e.g. 4:3, 16:9, 1.85:1,... See the full list of codes in ISAN Schema Appendix: List of Codes.</td>
<td>ImageAspectRatio (xs:string)</td>

```

The data types described in this chapter are used in common works and version descriptions data fields.
4  Sub-types for AV Work or Versions Descriptions

This section defines the sub-types contained in Single Works / Serial Episodes: WorkMetadataType, Series: SerialHeaderType and Descriptive information for the identification of versions of an Audiovisual Work.

4.1  DurationType

The DurationType defines the approximate duration/running time of an AV work or version.

<table>
<thead>
<tr>
<th>DurationType</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Duration</td>
<td>The duration or running time of the AV work or version. It contains a TimeValue and a TimeUnit attribute.</td>
<td>DurationType</td>
<td>1</td>
</tr>
<tr>
<td>TimeValue</td>
<td>Approximate duration/running time in the specified unit. A positive, not null integer.</td>
<td>String</td>
<td>1</td>
</tr>
<tr>
<td>TimeUnit</td>
<td>The unit of time in which the duration is expressed. Possible values are:</td>
<td>TimeUnitType</td>
<td>1</td>
</tr>
<tr>
<td>MIN</td>
<td>Minutes</td>
<td></td>
<td></td>
</tr>
<tr>
<td>SEC</td>
<td>Seconds</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MIL</td>
<td>Milliseconds</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

XML Sample

```xml
<Duration>
    <common:TimeUnit>MIN</common:TimeUnit>
    <common:TimeValue>144</common:TimeValue>
</Duration>
```

4.2  ReferenceCountryListType

The ReferenceCountryListType defines a list of country(ies) of reference for the production, publication or shooting of the audiovisual work.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>ReferenceCountryList</td>
<td>List of countries of reference. It contains a list of ReferenceCountry attributes.</td>
<td>ReferenceCountryListType</td>
<td>0 or 1</td>
</tr>
<tr>
<td><strong>ReferenceCountry</strong></td>
<td>Country of reference: The country of Production, Publication (video games) or Shooting.</td>
<td>ReferenceCountryType</td>
<td>1 or more</td>
</tr>
<tr>
<td>----------------------</td>
<td>----------------------------------------------------------------------------------</td>
<td>----------------------</td>
<td>-----------</td>
</tr>
<tr>
<td><strong>RelatedAction</strong></td>
<td>The action related to the country of reference. Values can be PRO Production Location, PUB Publication Location, SHO Shooting Location.</td>
<td>RelatedActionCodeType</td>
<td>xs:string</td>
</tr>
<tr>
<td><strong>Country</strong></td>
<td>The ISO country code and country label See the full list of codes in ISAN Schema Appendix: List of Codes</td>
<td>CountryType</td>
<td>1</td>
</tr>
</tbody>
</table>

**Example: XML representation**

```xml
<ReferenceCountryList>
  <ReferenceCountry>
    <Country>
      <country:CountryLabel>United States</country:CountryLabel>
      <country:CountryCode>
        <country:CodingSystem>ISO3166_1</country:CodingSystem>
        <country:ISO3166_1Code>US</country:ISO3166_1Code>
      </country:CountryCode>
    </Country>
    <RelatedAction>PRO</RelatedAction>
  </ReferenceCountry>
  <ReferenceCountry>
    <Country>
      <country:CountryLabel>France</country:CountryLabel>
      <country:CountryCode>
        <country:CodingSystem>ISO3166_1</country:CodingSystem>
        <country:ISO3166_1Code>FR</country:ISO3166_1Code>
      </country:CountryCode>
    </Country>
    <RelatedAction>PRO</RelatedAction>
  </ReferenceCountry>
</ReferenceCountryList>
```

### 4.3 CountryListType

The CountryListType defines a list of country(ies) such as the country(ies) of distribution.

<table>
<thead>
<tr>
<th><strong>Attributes</strong></th>
<th><strong>Description</strong></th>
<th><strong>Type</strong></th>
<th><strong>Occurrence</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>CountryList</td>
<td>List of countries. It contains a list of Country elements.</td>
<td>CountryListType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Country</td>
<td>The ISO country code and country label See the full list of codes in ISAN Schema Appendix: List of Codes</td>
<td>CountryType</td>
<td>1</td>
</tr>
</tbody>
</table>
4.4 **OriginalLanguageListType**

A list of spoken or written language(s) for the audiovisual work or version. For silent works use the custom XMU code (Mute Film) from the list of ISO 639-2 Language Codes.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>OriginalLanguageList</td>
<td>List of original spoken or written language(s) for the AV Work or Version.</td>
<td>OriginalLanguageListType</td>
<td>1</td>
</tr>
<tr>
<td>OriginalLanguage</td>
<td>Language for the work or version. For silent works, use the custom XMU code (Mute Film) from the list of ISO 639-2 Language Codes.</td>
<td>LanguageType</td>
<td>1 or more</td>
</tr>
</tbody>
</table>

**Example: XML representation**

```xml
<OriginalLanguageList>
  <OriginalLanguage>
    <language:LanguageLabel>French</language:LanguageLabel>
    <language:LanguageCode>
      <language:CodingSystem>ISO639_2</language:CodingSystem>
    </language:LanguageCode>
  </OriginalLanguage>
</OriginalLanguageList>
```
4.5 CompanyListType

This type defines a list of Production or Distribution / Publisher (video games) companies for the audiovisual work.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>CompanyList</td>
<td>List of companies.</td>
<td>CompanyListType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Company</td>
<td>Company details, contains a CompanyName and a CompanyKind element.</td>
<td>CompanyType</td>
<td>1 or more</td>
</tr>
<tr>
<td>CompanyKind</td>
<td>The Kind of Company.</td>
<td>CoPRolecodeType</td>
<td>1</td>
</tr>
<tr>
<td>CompanyName</td>
<td>The name of the production or distribution / publisher company.</td>
<td>CompanyNametype</td>
<td>1</td>
</tr>
</tbody>
</table>

**XML Sample**

```xml
<CompanyList>
  <Company>
    <CompanyKind>PRO</CompanyKind>
    <CompanyName>Sony Pictures Entertainment</CompanyName>
  </Company>
  <Company>
    <CompanyKind>PRO</CompanyKind>
    <CompanyName>Columbia Pictures</CompanyName>
  </Company>
  <Company>
    <CompanyKind>PRO</CompanyKind>
    <CompanyName>Metro Goldwyn Mayer</CompanyName>
  </Company>
</CompanyList>
```

4.6 ParticipantListType

The list of participants to the audiovisual work such as director, cast, ...

At least one Director is required. A scriptwriter and 3 actors are highly recommended when applicable.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>ParticipantList</td>
<td>List of Participants to the AV Work made of one or more Participant element(s).</td>
<td>ParticipantListType</td>
<td>1</td>
</tr>
</tbody>
</table>
### ISAN Data Fields

**Participant**

Participant defined with a *FirstName, LastName, and RoleCode* element.

At least one **Participant** with RoleCode “DIR” must be present.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Participant</strong></td>
<td>Participant defined with a <em>FirstName, LastName, and RoleCode</em> element.</td>
</tr>
<tr>
<td><strong>FirstName</strong></td>
<td>Participant’s first name</td>
</tr>
<tr>
<td><strong>LastName</strong></td>
<td>Participant’s last name</td>
</tr>
<tr>
<td><strong>RoleCode</strong></td>
<td>The role code of the participant in the AV Work as for example:</td>
</tr>
<tr>
<td>ACT</td>
<td>Actor</td>
</tr>
<tr>
<td>COM</td>
<td>Composer</td>
</tr>
<tr>
<td>DIR</td>
<td>Director (Mandatory)</td>
</tr>
<tr>
<td>DIS</td>
<td>Distributor</td>
</tr>
<tr>
<td>EPRO</td>
<td>Executive Producer</td>
</tr>
<tr>
<td>PRO</td>
<td>Producer</td>
</tr>
<tr>
<td>SCR</td>
<td>Screenwriter</td>
</tr>
<tr>
<td>SPK</td>
<td>Speaker</td>
</tr>
<tr>
<td>NAR</td>
<td>Narrator</td>
</tr>
</tbody>
</table>

See the full list of codes in [ISAN Schema Appendix: List of Codes](#).

### XML Sample

```
<ParticipantList>
  <Participant>
    <participant:FirstName>Martin</participant:FirstName>
    <participant:LastName>Campbell</participant:LastName>
    <participant:RoleCode>DIR</participant:RoleCode>
  </Participant>
  <Participant>
    <participant:FirstName>Barbara</participant:FirstName>
    <participant:LastName>Broccoli</participant:LastName>
    <participant:RoleCode>PRO</participant:RoleCode>
  </Participant>
  <Participant>
    <participant:FirstName>Neal</participant:FirstName>
    <participant:LastName>Purvis</participant:LastName>
    <participant:RoleCode>SCR</participant:RoleCode>
  </Participant>
  <Participant>
    <participant:FirstName>Daniel</participant:FirstName>
    <participant:LastName>Craig</participant:LastName>
    <participant:RoleCode>ACT</participant:RoleCode>
  </Participant>
  <Participant>
    <participant:FirstName>Judi</participant:FirstName>
    <participant:LastName>Dench</participant:LastName>
    <participant:RoleCode>ACT</participant:RoleCode>
  </Participant>
  <Participant>
    <participant:FirstName>Eva</participant:FirstName>
  </Participant>
</ParticipantList>
```
4.7 EpisodeDetailType

This object is specific to serial episodes, it binds the Episode with the Serial Header when new episodes are registered, and contain the Season and Episode Number information.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>EpisodeDetail</td>
<td>Specific metadata for Episodic Works, it contains the following elements: SerialHeaderRegistrantId, SerialHeaderId, Season, Episode.</td>
<td>EpisodeDetailType</td>
<td>1</td>
</tr>
<tr>
<td>SerialHeaderId</td>
<td>Serial Header Identifier = ISAN root. 12 hexadecimal digits as the ISAN root segment that is shared by episodes of the serial. Refer to the description of isanType.</td>
<td>isanType</td>
<td>0 or 1*</td>
</tr>
<tr>
<td>NOTE: SerialHeaderId is created with the first episode of the serial. It can therefore not be used for a new serial registration; use a SerialHeaderRegistrantId instead.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>SerialHeaderRegistrantId</td>
<td>Registrant ID (or token) provided by the registrant to identify a Serial Header. This ID or Token is only known and usable by the Registrant of the first ISAN allocated to an episode of the series. It shall usually only be used in bulk registrations for new series that have never been registered with ISAN.</td>
<td>SerialHeaderRegistrantIdType</td>
<td>0 or 1*</td>
</tr>
<tr>
<td>Season</td>
<td>Season Number Usually an integer</td>
<td>SeasonType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>Episode</td>
<td>Episode Number Usually an integer</td>
<td>EpisodeType</td>
<td>0 or 1</td>
</tr>
</tbody>
</table>

* At least one SerialHeaderRegistrantId or SerialHeaderId must be present for ISAN Registration.

XML Sample

```xml
<EpisodeDetails>
  <serial:SerialHeaderRegistrantId>123456879</serial:SerialHeaderRegistrantId>
  <serial:Season>2</serial:Season>
  <serial:Episode>23</serial:Episode>
</EpisodeDetails>
```
4.8 isanType

The ISAN type is used to represent ISAN identifiers for works and versions (V-ISAN)

The ISAN is a 24 digit hexadecimal number made of 16 hexadecimal digit followed with a check character (using Arabic numerals 0 to 9 and letters A to Z), followed by an 8 hexadecimal digit version segment, followed with a check character (using Arabic numerals 0 to 9 and letters A to Z).

The different coding form of the ISAN identifier is described in the ISAN User Guide,

The table below outlines the XML coding for an ISAN or ISAN Version (V-ISAN) as defined in ISO 15706-2 Annex D.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>ISAN</td>
<td>XML coding for an ISAN or ISAN Version (V-ISAN) as defined in ISO 15706-2 Annex D</td>
<td>isanType</td>
<td>1</td>
</tr>
<tr>
<td>Attributes</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Root</td>
<td>Root section of the ISAN or V-ISAN (ISAN Version)</td>
<td>rootType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Tree segment of 4-digit hexadecimal values separated with a hyphen “-”.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>EpisodeOrPart</td>
<td>Episode section of the ISAN or V-ISAN</td>
<td>episodeOrPartType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>One segment of 4-digit hexadecimal values.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Check1</td>
<td>Version section of the ISAN or V-ISAN (ISAN Version)</td>
<td>checkType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>One digit made of a decimal value from 0 to 9 or an upper-case character from A to Z.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Version</td>
<td>First check character (roots and episode section)</td>
<td>versionType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Two segments of 4-digit hexadecimal values separated with an hyphen “-”.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Check2</td>
<td>Second check character (roots and episode and version section)</td>
<td>checkType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>One digit made of a decimal value from 0 to 9 or an upper-case character from A to Z.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Example 1: ISAN representation in XML

```xml
<ISAN>
  <Root>0000-0000-CFF1</Root>
  <EpisodeOrPart>004B</EpisodeOrPart>
  <Check1>1</Check1>
  <Version>0000-0000</Version>
  <Check2>Y</Check2>
</ISAN>
```
Example 2: Root ISAN identifying a Serial Header in XML

```
<SerialHeaderId>
  <Root>0000-0000-CFF1</Root>
</SerialHeaderId>
```

### 4.9 TitleListType

The TitleListType is defines the list of original and alternate titles by which a work or a version is known. At least one original title is required.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>TitleList</td>
<td>List of Title(s) for an AV Work or a Version.</td>
<td>TitleListType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>It is made of one or more TitleDetail elements.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>TitleDetail</td>
<td>A title made of a TitleKind, a TitleLanguage and a Title string element.</td>
<td>TitleDetailType</td>
<td>1 or more</td>
</tr>
<tr>
<td>TitleKind</td>
<td>The kind of title. Possible values are:</td>
<td>TitleKindType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>ORIGINAL</td>
<td>(xs:string)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Original title of an AV Work (or a Version of an AV Work) used during its initial exploitation. At least one original title is mandatory.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>ALTERNATE</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Alternate title of the AV Work (or a Version of an AV Work). At least one original title is mandatory</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>TRANSLATION</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Self-translation of an original or alternate title. An English translation is highly recommended when no English original or alternate title is available.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Language</td>
<td>The language in which the Title is written.</td>
<td>LanguageType</td>
<td>1</td>
</tr>
<tr>
<td>Title</td>
<td>The title of the work or version.</td>
<td>TitleType</td>
<td>1</td>
</tr>
</tbody>
</table>

**Example: XML representation**

```
<TitleList>
  <title:TitleDetail>
    <title:TitleKind>ORIGINAL</title:TitleKind>
    <title:Language>
      <language:LanguageLabel>French</language:LanguageLabel>
      <language:LanguageCode>
        <language:CodingSystem>ISO639_2</language:CodingSystem>
      </language:LanguageCode>
    </language:Language>
  </title:TitleDetail>
  <title:TitleDetail>
    <title:Title>Le Grand Bleu</title:Title>
  </title:TitleDetail>
  <title:TitleDetail>
    <title:TitleKind>ALTERNATE</title:TitleKind>
    <title:Language>
      <language:LanguageLabel>English</language:LanguageLabel>
      <language:LanguageCode>
        <language:CodingSystem>ISO639_2</language:CodingSystem>
      </language:LanguageCode>
    </title:Language>
  </title:TitleDetail>
</TitleList>
```
4.10 LanguageType

The LanguageType define a language in a recognized language coding scheme. To date the ISAN registry supports only the ISO639-2 coding system. The LanguageType is used to represent:

- the language of a Title (works and versions)
- the original language of a work (Original Language field)
- the supported languages for a version (Version language(s) fields)

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Language</td>
<td>The Language defined with LanguageLabel and LanguageCode elements</td>
<td>LanguageType</td>
<td>1 or more</td>
</tr>
<tr>
<td>LanguageLabel</td>
<td>The name of the country</td>
<td>LanguageLabelType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>LanguageCode</td>
<td>The Language Code made of a CodingSystem and a CodeISO639_2 element.</td>
<td>LanguageCodeType</td>
<td>1</td>
</tr>
</tbody>
</table>
**CodingSystem**
The Coding System for the language code. Only ISO 639-2 is supported so far. Use always the value: **ISO639_2** (other systems such as RFC3066 may be supported in the future)

**CodeISO639_2**
The ISO 639-2 language code
See the full list of codes in [ISAN Schema Appendix: List of Codes](#)

**Example: XML representation**
```xml
<Language>
  <LanguageLabel>French</LanguageLabel>
  <LanguageCode>
    <CodingSystem>ISO639_2</CodingSystem>
    <CodeISO639_2>FRE</CodeISO639_2>
  </LanguageCode>
</Language>
```

**4.11 CountryType**

The CountryType defines a country in a recognized country coding scheme. To date the ISAN registry only implements the ISO 3166-1 coding system. The CountryType is used to represent:

- A country in which a work has been shooted or produced or published.
- A country / region in which a version of a work is distributed.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Country</td>
<td>A Country code and Label. It is made of a <strong>CountryLabel</strong> and <strong>CountryCode</strong> element.</td>
<td>CountryType</td>
<td>1</td>
</tr>
<tr>
<td>CountryLabel</td>
<td>The Label of the country</td>
<td>CountryLabelType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>CountryCode</td>
<td>The Country Code in a specific coding system. It is made of a <strong>CodingSystem</strong> and a <strong>CodeISO3166_1</strong> element.</td>
<td>CountryCodeType</td>
<td>1</td>
</tr>
<tr>
<td>CodingSystem</td>
<td>The Coding System for the country code. Always use ISO 3166-1. Other coding systems might be supported in the future.</td>
<td>CodingSystemType</td>
<td>1</td>
</tr>
</tbody>
</table>
### CodeISO3166_1

An ISO 3166-1 Country code

<table>
<thead>
<tr>
<th>CodeISO3166_1Type</th>
<th>1</th>
</tr>
</thead>
</table>

See the full list of codes in ISAN Schema Appendix: List of Codes

---

### Example: XML representation

```xml
<Country>
  <country:CountryLabel>United States</country:CountryLabel>
  <country:CountryCode>
    <country:CodingSystem>ISO3166_1</country:CodingSystem>
    <country:ISO3166_1Code>US</country:ISO3166_1Code>
  </country:CountryCode>
</Country>
```

---

### 4.12 ExternalIdListType

The ExternalIdListType defines the list of alternate identifiers for the work such as the registrant private identifier (REGID), an URN, the IMDB number or the EIDR. Closely related identifiers can also be referenced here such as the ISRC or ISWC for the music associated to the work, or ISNI of the work’s participants, etc...

At least one registrant private ID or registrant token is required for registrations.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>ExternalIdList</td>
<td>List of other Identifiers for the work or version. It contains one or several ExternalIdType elements.</td>
<td>ExternalIdListType</td>
<td>1</td>
</tr>
<tr>
<td>ExternalId</td>
<td>Other identifier information made of a Code, Id, and note element.</td>
<td>ExternalIdType</td>
<td>1 or more</td>
</tr>
<tr>
<td>Code</td>
<td>The name or kind of other identifier such as IMDB, REGID, EIDR,...</td>
<td>IdCodeType</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>Values are taken from a controlled vocabulary list.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>See the full list of codes in ISAN Schema Appendix: List of Codes</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Id</td>
<td>External Identifier</td>
<td>ExtIdType</td>
<td>1</td>
</tr>
<tr>
<td>Note</td>
<td>A note or description of the identifier. Usually the domain where the</td>
<td>String</td>
<td>0 or 1</td>
</tr>
<tr>
<td></td>
<td>identifier can be resolved, e.g. eidr.org, imdb.com, ...</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| Example: XML representation |

```xml
<ExternalIdList>
  <externalid:ExternalId>
    <externalid:Code>REGID</externalid:Code>
    <externalid:Id>123456</externalid:Id>
  </externalid:ExternalId>
  <externalid:ExternalId>
    <externalid:Id>123456</externalid:Id>
  </externalid:ExternalId>
</ExternalIdList>
```
4.13 CompositeListType

The composite type is used to reference compilations or components of a work or version as a list of ISAN. Each item of the compilation or composite is identifying a distinct work, version of work, closely related content or closely related item.

A composite is an audiovisual content which contains one or more other works, versions or portions of content, each of which is insubstantial in relation to the entire composite work (e.g. segments, highlights, etc). Any work or versions can potentially be a composite. The composite information can be added after the allocation of the ISAN. EXAMPLES: A feature film which contains parts of animated cartoons or other film clips; a television program that contains footage from previously produced feature films, from episodes of television series, or from other audiovisual works, a mashup made of parts from different works.

Compilations of works or versions are grouping of two or more finished works or related items into a single envelope such as a TV program, a Blu-ray that compiles episodes of a serial, a packaged product such as a Blu-ray or a DCP with different tracks (video, sound, subtitles, captions, etc...) each identified with an ISAN/V-ISAN.

<table>
<thead>
<tr>
<th>Attributes</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>CompositeList</td>
<td>List of composite works or versions, it contains one or more ISAN element(s).</td>
<td>CompositeListType</td>
<td>0 or 1</td>
</tr>
<tr>
<td>ISAN</td>
<td>ISAN of the component or compilation item.</td>
<td>isanType</td>
<td>1 or more</td>
</tr>
</tbody>
</table>

Example: XML representation

```xml
<CompositeList>
  <ISAN root="0000-0000-CFF1" episodeOrPart="004B" check1="1" version="0000-0000" check2="Y"/>
  <ISAN root="0000-0000-B495" episodeOrPart="000B" check1="9" version="0000-0000" check2="A"/>
  <ISAN root="0000-0000-6776" episodeOrPart="0000" check1="B" version="0000-0000" check2="D"/>
</CompositeList>
```
4.14 Relations

The Relations type defines the kind of the version (Language, Edition, Media...) and qualifies the relationships with the parent work or the parent version (when the version is a version of a version). The Relations type contains a list of Relation elements.

It is preferable that only one Relation defines the version. In case of doubt, the registrant will choose the Version Kind & Relationship that corresponds best to the main purpose of the version to identify. For example, the content on a Blu-ray is often resulting from editions + language variations of the original content and then embodiment of this content plus other supplemental material on a disk. However, when the registrant obtains a V-ISAN for content identification in AACS then the main purpose of the version leads to “Version Kind = Media” with the “Relationship = is media fixation of”.

<table>
<thead>
<tr>
<th>Attribute</th>
<th>Description</th>
<th>Type</th>
<th>Occurrence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Relation</td>
<td>Version Kind and relationships with parent work or versions.</td>
<td>Relation</td>
<td>1</td>
</tr>
<tr>
<td>VersionKind</td>
<td>The kind of version with its parent relationship.</td>
<td>VersionKind</td>
<td>1</td>
</tr>
<tr>
<td></td>
<td>The following kind of versions are possible:</td>
<td></td>
<td></td>
</tr>
<tr>
<td>LANGUAGE</td>
<td>Language variant such as dubbing or subtitling. Can apply to Expressions and/or Manifestations.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>EDITION</td>
<td>Edition variant such as add-ons or cutoffs (e.g. ads inserts or local adaptation, a clip extracted from the work, etc). Can apply to Expressions and/or Manifestations.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>MEDIA</td>
<td>A media fixation of the work or one of its manifestations (e.g. Blu-ray, digital encoding, a mezzanine file, etc...). Media versions are always manifestations.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RELATED_CONTENT</td>
<td>Related contents can be trailers or promotional material of the work, supplemental material (behind the scenes, bonus, interviews, ...), etc...</td>
<td></td>
<td></td>
</tr>
<tr>
<td>RELATED_ITEM</td>
<td>Related Items can be soundtracks, closed captioning tracks, fingerprints, etc...</td>
<td></td>
<td></td>
</tr>
<tr>
<td>GENERIC_VERSION</td>
<td>Undefined Version Kind</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

| ParentRelationKind | The relationships are taken from a list of controlled vocabulary. | ParentRelationKind | 1          |

See the full list of codes in [ISAN Schema Appendix: List of Codes](#).

**XML Sample 1**: A language variant with dubbing and subtitling of the original work identified with ISAN 1234-1234-1234-0023-X-0000-0000-1

```xml
<VesionKindList>
 <VersionKind>
  <Kind>LANGUAGE</Kind>
</VersionKind>
```
XML Sample 2: The soundtrack of the dubbed version above identified with the ISAN Version ISAN 1234–1234–1234–0023–X–0000–0102–Y
